### **DETAILED ACTION**

Claims 1-27 are pending in the instant application.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 2, drawn to a composition and method of achieving localized, temporal expression of a gene under control of the heat inducible promoter, pDATH-X, classifiable in class 435, subclass 6.
- II. Claim 3, drawn to a recombinant vector pDATE-X, classifiable in class 435, subclass 320.1.
- III. Claims 4-15, drawn to compositions and methods of treating local and metastatic breast, ovarian or prostate cancer comprising the administration of recombinant vector pRIBs-X or pRIPs-X, classifiable in classes 435 and 514, subclasses 320.1 and 44, respectively.
- IV. Claims 16-27, drawn to drawn to compositions and methods of treating local and metastatic breast, ovarian or prostate cancer comprising the administration of recombinant vector pHIBs-X or pHIPs-X, classifiable in classes 435 and 514, subclasses 320.1 and 44, respectively.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II and III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP §

Art Unit: 1635

808.01). In the instant case the different inventions are chemically, biologically, structurally and functionally distinct from each other and thus one does not render the other obvious. The vectors of each group are not required to make the vectors of the other groups. Therefore the invention of these four groups are capable of supporting separate patents.

Inventions I and III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Groups I and III and IV comprise steps which are not required for or present in the methods of the other groups. Each method involves utilization of a distinct and different compound (e.g. a distinct vector). The operation, function and effects of these different methods are different and distinct from each other. Therefore, the inventions of these different and distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1635

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
